

SHIVARAJU N S

Software Engineer | Full Stack Developer | Java | Spring Boot | React | MySQL
+91 9901711038 | shivrajns.work@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#) | Karnataka, India

SUMMARY

Fresh engineering graduate with a strong foundation in software development, specializing in Java and Spring Boot back-end systems and React.js front-end interfaces. Demonstrated ability to architect scalable, layered applications including secure REST APIs with JWT authentication and role-based access control as evidenced by Jobzey, a live, deployed full-stack job platform. Background in Electronics and Communication Engineering cultivates disciplined problem-solving and analytical thinking aligned with engineering best practices. Eager to contribute to collaborative, learn rapidly from senior engineers, and uphold high coding standards and code quality in a hybrid Bengaluru environment.

TECHNICAL SKILLS

Programming Languages: Java (primary), JavaScript.

Backend: Spring Boot, REST API design, Hibernate / JPA, JWT Authentication, Role-based Access Control.

Frontend: React.js, HTML5, CSS3, Asynchronous JavaScript, React Hooks.

Databases: MySQL schema design, CRUD operations, relational modelling.

Tools: Git, GitHub, Docker, Postman, Firebase Console.

Methodologies: OOP, debugging & defect resolution, code review practices

Core Concepts: Operating Systems, Computer Networks.

PROJECTS

Jobzey – Job Platform | Java, Spring Boot, React.js, MySQL, REST APIs, Firebase console, Git, GitHub | [Live V1.0](#) | [Code](#)

A full-stack, role-based job marketplace (Admin, Recruiter, Jobseeker) with a deployed live environment.

- Reduced API authentication risk by implementing JWT-based authentication and role-based access control across 3 distinct user roles, securing all 15+ REST endpoints against unauthorized access.
- Improved data integrity and query reliability by designing a normalized MySQL relational schema with 6 entity tables, enabling end-to-end CRUD operations for seamless data persistence across user, job, and application workflows.
- Accelerated front-end development and user experience quality by building responsive React.js interfaces with asynchronous API integration, client-side form validation, and custom error-handling states, reducing UI-side failure points during network delays.
- Maintained codebase stability and development velocity by establishing a structured Git workflow with feature branching and commit discipline, enabling continuous, traceable version control across the full development lifecycle.

Clima – Weather Web Application | React.js, JavaScript, OpenWeather API | [Live](#) | [Code](#)

A responsive single-page application that retrieves and displays live weather data for 200,000+ cities worldwide.

- Delivered real-time data rendering by integrating asynchronous JavaScript fetch requests to the OpenWeather REST API, parsing and displaying live weather data with consistent UI accuracy.
- Enhanced application responsiveness by engineering dynamic state management with React Hooks, achieving fast component re-renders and optimized reuse across search and display flows.
- Improved user reliability by implementing robust client-side error-handling and custom loading states, maintaining a seamless experience during API latency or network disruptions.

EDUCATION

Bachelor of Engineering (B.E.) – Electronics & Communication Engineering

2022 – 2026

East Point College of Engineering & Technology, Bangalore

Aggregate: 7.6 CGPA

CERTIFICATIONS & LEARNING

- Introduction to Java as a Second Language | LearnQuest offered through Coursera | [Link](#)
- Actively pursuing continuous learning in modern software development practices, Agile methodologies, and cloud fundamentals.

PROFESSIONAL HIGHLIGHTS

- Ownership mindset: Self-directed the full-stack architecture, development, testing, and deployment of a live production application as an individual contributor
- Analytical problem-solving: ECE engineering background builds a rigorous, systems-level approach to debugging, root-cause analysis, and solution design
- Continuous & rapid learning: Independently acquired Java, Spring Boot, React.js, Docker, and JWT security outside of formal ECE curriculum to build software engineering expertise.
